

Some AGC Papers

J. M. Khoury, "On the Design of Constant Settling Time AGC Circuits," *IEEE Transactions on Circuits and Systems – II: Analog and Digital Signal Processing*, Vol. 45, No. 3, pp. 283-294, March 1998.

Y. Fujimoto, H. Tani, M. Maruyama, H. Akada, H. Ogawa, and M. Miyamoto, "A Low-Power Switched-Capacitor Variable Gain Amplifier," *Journal of Solid-State Circuits*, Vol. 39, No. 7, pp. 1213-1216, July 2004.

M. M. Green and S. Joshi, "A 1.5V CMOS VGA Based on Pseudo-Differential Structures," *Proceedings of the ISCAS*, Vol. 4, pp. 461-464, May 2000.

S. Otaka, G. Takemura, and H. Tanimoto, "A Low-Power Low-Noise Accurate Linear-in-dB Variable-Gain Amplifier with 500-MHz Bandwidth," *Journal of Solid-State Circuits*, Vol. 35, No.12, pp. 1942-1498, December 2000.

K. M. Abdelfattah and A. M. Soliman, "Variable Gain Amplifiers Based on a New Approximation Method to Realize the Exponential Function," *IEEE Transactions on Circuits and Systems*, Vol. 49, No 9, pp. 1348-1354, September 2002.

Digital Communications Overview Papers

D. A. Johns and D. Essig, "Integrated Circuits for Data Transmission Over Twisted-Pair Channels," *IEEE Journal of Solid-State Circuits*, Vol. 32, No. 3, pp. 398-406, March 1997.

R. L. Freeman, "Bits, Symbols, Bauds, and Bandwidth," *IEEE Communications Magazine*, pp. 96-99, April 1998.
